

Release Notes for i>clicker and i>grader v5.3.0 (Macintosh)

i>clicker and i>grader v5.3.0 includes the following enhancement and bug fix.

- Support for anonymous polling. When anonymous polling is enabled from the drop-down menu on the floating toolbar, students' responses are recorded as an "X" in i>grader and in the session data and log files. On anonymous polling questions, students will only be able to receive participation/attendance points, not performance points.
- An i>clicker bug that allowed for more than one radio button to be selected in the Subfrequency Code 2 preference has been fixed.
